

Paper Information Record — Christensen2021

Paper ID: 0024 | Oxford Missing Data Study

General Information

Field	Value
Paper ID	0024
Title	Political Hedging and Idiosyncratic Volatility
Authors	Christensen, D. M., et al.
Year & Journal	Strategic Management Journal

Data Structure

Field	Value
Data type	Firm-year panel, firm+year FE, clustered SEs (gvkey)
Observations (N)	32,404 (regression sample after FE absorption)
Preferred model column	Main specification

Core Regression Model

Field	Value
Dependent variable	idiovol (idiosyncratic stock return volatility)
Focal IV	politicalhedge (political hedging index)
Controls	politicalconnections, mktvol, beta, mve, btm, roa, loss, cash, govtsales, zscore, leverage, competition, ppe
Fixed effects	gvkey + year (two-way)
Clustered SEs	gvkey (firm-level, CRV1)

Simulation Configuration

Field	Value
Key variables (4)	mktvol, beta, btm, competition
MAR control	roa (return on assets, continuous, complete, correlated with all key vars)
Mechanisms	MCAR, MAR, NMAR
Missingness proportions	1%, 5%, 10%, 20%, 30%, 40%, 50%
Methods	LD, Mean, Reg, Iter, RF, DL, MILGBM
Iterations per scenario	30
MAR/NMAR strength	1.5
M (multiple imputation)	5

Baseline Validation

Field	Value
Baseline coefficient	-0.0311 (politicalhedge)
Baseline SE	0.00938
Baseline p-value	0.000933
Published value	-0.031*** (highly significant)
R-squared	See simulation output

Run Log

Field	Value
Full run start	2026-04-12
Full run complete	2026-04-15
Total combinations	17640 (3x7x4x30x7)
Errors	0
DL method	TensorFlow 2.21.0, MLP 32->Dropout(0.1)->16->1, ReLU, Adam lr=0.005, EarlyStopping
MILGBM method	LightGBM 4.6.0, MICE M=5, Rubin's Rules, 30 estimators, max_depth=4
Note	Clean single-session run. 588/588 N_iters=30. MCAR 1pct B_prop=100%.
