

Paper Information Record — Chyz2023

Paper ID: 0023 | Oxford Missing Data Study

General Information

Field	Value
Paper ID	0023
Title	The Effect of IPO on Tax Avoidance: Evidence from the JOBS Act
Authors	Chyz, J., Henry, E., Omer, T., & Wu, B.
Year & Journal	Strategic Management Journal (working paper)

Data Structure

Field	Value
Data type	Firm-year panel, year FE, clustered SEs (gvkey)
Observations (N)	12,211 (regression sample after FE absorption)
Preferred model column	Table 3, Column 1

Core Regression Model

Field	Value
Dependent variable	ch1_gaap_etr (change in GAAP effective tax rate)
Focal IV	diff_laggaap_etr (difference in lagged ETR, IPO effect proxy)
Controls	diff_median_laggaap_etr, ch1_s_rd, ch1_s_ad, ch1_s_sga, ch1_s_capexp, ch1_s_cash, ch1_s_fi, ch1_s_eqinc, ch1_nol, ch1_s_intangible, ch1_s_ppent, ch1_s_fcf, ch1_size, ch1_roa_pretax, ch1_lev_lt
Fixed effects	fyear (year FE)
Clustered SEs	gvkey (firm-level)

Simulation Configuration

Field	Value
Key variables (4)	ch1_s_rd, ch1_s_sga, ch1_roa_pretax, ch1_size
MAR control	ln_mve
Mechanisms	MCAR, MAR, NMAR
Missingness proportions	1%, 5%, 10%, 20%, 30%, 40%, 50%
Methods	LD, Mean, Reg, Iter, RF, DL, MILGBM
Iterations per scenario	30
MAR/NMAR strength	1.5
M (multiple imputation)	5

Baseline Validation

Field	Value
Baseline coefficient	-0.0409 (diff_laggaap_etr)
Baseline SE	0.00876
Baseline p-value	3.03e-06
Published value	-0.041*** (Table 3, Col 1)
R-squared	See simulation output

Run Log

Field	Value
Full run start	2026-04-10
Full run complete	2026-04-12
Total combinations	17640 (3x7x4x30x7)
Errors	0
DL method	TensorFlow 2.21.0, MLP 32->Dropout(0.1)->16->1, ReLU, Adam lr=0.005, EarlyStopping
MILGBM method	LightGBM 4.6.0, MICE M=5, Rubin's Rules, 30 estimators, max_depth=4
Note	Run interrupted and resumed; summary sheets rebuilt from parsed txt outputs in generate_deliverables.py
