

Paper Information Record — Stroube2024

Paper ID: 0017 | Oxford Missing Data Study

General Information

Field	Value
Paper ID	0017
Title	Status and Consensus: Heterogeneity in Audience Evaluations of Female- versus Male-Lead Films
Authors	Bryan Stroube

Data Structure

Field	Value
Data type	Cross-section (film-level)
Observations (N)	4,012
Preferred model column	Table 2, Model 2 (m.pooled.sd)

Core Regression Model

Field	Value
Dependent variable	sd_pooled
Focal IV	FLead (binary, 1 = female lead actor)
Controls	mean_pooled, kim_violence_gore, kim_sex_nudity, kim_language, major, log_bom_opening_theaters, genres_cou
Fixed effects	bom_year (27 levels) + bom_open_month (12 levels) + 22 genre dummies (treatment coding, drop_first=True)
Clustered SEs	None (standard OLS SEs — confirmed from R source)

Simulation Configuration

Field	Value
Key variables (4)	kim_violence_gore, kim_sex_nudity, kim_language, log_bom_opening_theaters
MAR control	genres_count
Mechanisms	MCAR, MAR, NMAR
Missingness proportions	1%, 5%, 10%, 20%, 30%, 40%, 50%
Methods	LD, Mean, Reg, Iter, RF, DL, MILGBM
Iterations per scenario	30
MAR/NMAR strength	1.5
M (multiple imputation)	5

Baseline Validation

Field	Value
Baseline coefficient	0.0468 (FLead)
Baseline SE	0.0080

Field	Value
Baseline p-value	<0.001 (p = 6.23e-09)
Published value	0.047** (Table 2, Model 2; rounds to 0.0468)
R-squared	0.5620

Run Log

Field	Value
Full run start	2026-03-31 11:00:51
DL method	TensorFlow 2.20.0, MLP 32->Dropout(0.1)->16->1, ReLU, Adam lr=0.005, EarlyStopping
MILGBM method	LightGBM 4.6.0, MICE M=5, Rubin's Rules, 30 estimators, max_depth=4
